Albums:

Overview

- Remove button on each album → confirmation required
- Edit button on each album
- Maybe somehow sort/filter albums ?

Album 1 detail view

- Search and filters should work as on Photos
- There should be a tile and list view as well
- On single photos there must be a button to remove it from the album → confirmation?
- Nice to have: user can determine the order of the photos within an album (drag and drop) - per default photos should be sorted by time
- Nice to have: user has the possibility to set one image as title image of his album (how?)
